Warm-Air-Heating-|Status-Heating

Warm air heating differs significantly from radiant heating (e.g. hot water radiators or gas-fired radiant tubes) in that heat is transferred to the air within the space via a heat exchanger within the unit. The heat is then distributed within the space primarily by the heaters themselves or with the additional use of de-stratification fans. The resulting warm air flow throughout the space is ...

Although Warm Air Heating Systems have arguably fallen out of fashion in new properties, they have been one of the most efficient kinds of heating on offer over the past 4 decades. In fact, the efficiency of traditional warm air heating has only been matched by radiator based systems in the last decade - and here at Hot Water and Central Heating Ltd we can offer advice based on our years of ...

Warm-Air-Central-Heating-Systems-Gas-Warm-Air-and-Combi-

Warm air heating, or warm air central heating, is the process of turning cool air into warm air by passing it to a heat exchanger via a fan and then blowing it into rooms through vents in the floor, walls or ceiling. The heated metal plates within the exchanger heat the cool air as it passes across, turning it into hot air. Once the air has been warmed it is passed out to the remainder of the ...

My mother's house has a warm air central heating/hot water system installed when the house was built in 1964. The system is still going strong 50+ years on with minimal maintenance issues, and does a brilliant job of heating the (four bedroomed) house at reasonable cost. Neither she nor I can understand why the warm air system fell out of favour.
