20,000 BC, the peak of the last ice age—the atmosphere is heavy with dust, deserts, and glaciers span vast regions, and people, if they survive at all, exist in small, mobile groups, facing the threat of extinction. But these people live on the brink of seismic change—10,000 years of climate shifts culminating

A warming climate holds important implications for other aspects of the global environment.

Because of the slow process of heat diffusion in water, the world ' s oceans are likely to continue to warm for several centuries in response to increases in greenhouse concentrations that have taken place so far.
