(Introduction) Character Theory

Of Finite Groups

In mathematics, more specifically

in group theory, the character of

a group representation is a

function on the group that

associates to each group element

the trace of the corresponding

matrix. The character carries the

essential information about the

representation in a more

condensed form. Georg Frobenius

initially developed representation

theory of finite groups entirely based on the characters, and without any explicit matrix realization of representations themselves. This is possible because

Character theory - Wikipedia
Character theory provides a powerful tool for proving theorems about finite groups. In addition to dealing with techniques for applying characters to "pure" group theory, a large part of this book is devoted to the properties of the characters themselves and how these properties reflect and are reflected in the structure of the group.

Given a group G and representations V and W , let $\text{Hom } G(V;W)$ be the linear maps $\phi: V \rightarrow W$ with $\phi(g \cdot v) = g \cdot \phi(v)$. Elias Sink and Allen Wang Character Theory of Finite Groups PRIMES Conference 3 / 13

Character Theory of Finite Groups
- MIT Mathematics

Representation theory and character theory are basic tools for the study of the structure of finite groups. Based on the classical results by Frobenius, Burnside, and Schur, character theory makes a central contribution to the complete classification of finite simple groups.

Character Theory of Finite Groups
- ScienceDirect

Through the fundamental work of Deligne and Lusztig in the 1970s, further developed mainly by Lusztig, the character theory of reductive groups over finite fields has grown into a rich and vast area of mathematics. It incorporates tools and methods from algebraic geometry, topology, combinatorics and computer algebra, and has since evolved substantially.

The Character Theory of Finite
Groups of Lie Type

A linear representation of a finite group is a group homomorphism:

→ = (). Here $\text{GL}(V)$

$\{\text{GL}\}(V)$ is notation for a general linear group, and $\text{Aut}(V)$ $\{\text{Aut}\}(V)$ for an automorphism group.

Representation theory of finite groups - Wikipedia

The character: χ of a representation ρ of a group G on a finite-dimensional vector space V over a field F is the trace of the representation $\rho(g)$, i.e. $\chi(g) = \text{tr}(\rho(g))$ for $g \in G$. In general, the trace is not a group homomorphism, nor does the set of traces form a group [citation needed]. The characters of one-dimensional representations are identical to one-dimensional representations, so the above ...

Character (mathematics) -
Wikipedia

In mathematics, a character group is the group of representations of a group by complex-valued functions. These functions can be thought of as one-dimensional matrix representations and so are special cases of the group characters that arise in the related context of character theory. Whenever a group is represented by matrices, the function defined by the trace of the matrices is called a character; however, these traces do not in general form a group. Some important properties of these one-dim

- I. Martin Isaacs ...

Character theory provides a powerful tool for proving theorems about finite groups. In fact, there are some important results, such as Frobenius' theorem, for which no proof without characters is known. (Until fairly recently, Burnside's pq -theorem was another outstanding example of this.)

A Series of Monographs and Textbooks

This classic book offers one of the definitive treatments of character theory of finite groups, written by one of the foremost experts in the field. The text assumes that the reader had been exposed to a one year sequence of graduate
