The role of mixed community-acquired pneumonia (CAP) is controversial. The aim of the present study was to determine the incidence, principal microbial patterns, clinical predictors and course of mixed CAP. The current study included 1,511 consecutive hospitalised patients with CAP. Of these, 610 (40%) patients had an established aetiology.

Mixed community-acquired pneumonia in hospitalised patients

The role of mixed community-acquired pneumonia (CAP) is controversial. The aim of the present study was to determine the incidence, principal microbial patterns, clinical predictors and course of mixed CAP. The current study included 1,511 consecutive hospitalised patients with CAP. Of these, 610 (40%) patients had an established aetiology.

Mixed community-acquired pneumonia in hospitalised ...

The incidence of a defined series of complications was higher in patients with mixed pneumonia (39.3% vs. 18.6%; OR=2.84; p=0.02). Community-acquired pneumonia of mixed etiology is uncommon. Patients with mixed pneumonia are more likely to have underlying medical conditions, and they may have a more severe course of disease. PMID: 15931452

Community-acquired pneumonia of mixed etiology: prevalence ...

In adults with mixed severity community-acquired pneumonia, a strategy of stopping antibiotics based on guidelines was not different to physician-guided stopping for a range of outcomes, including mortality, symptoms, recurrence, length of hospital stay and adverse events.

Summary of the evidence | Pneumonia (community-acquired ...

Mixed community-acquired pneumonia in hospitalised patients The role of mixed community-acquired pneumonia (CAP) is controversial. The aim of the present study was to determine the incidence, principal microbial patterns, clinical predictors and course of mixed CAP. The current study included 1,511

Community Acquired Pneumonia Of Mixed Etiology Prevalence ...

The recommendation on the use of simple analgesia for symptomatic relief is based on the Annotated British Thoracic Society (BTS) guideline on the management of community acquired pneumonia in adults which states that pleuritic pain should be relieved using simple analgesia such as paracetamol [BTS, 2015a]. Rest and preventing dehydration

Scenario: Community-acquired pneumonia | Management ...

This guideline sets out an antimicrobial prescribing strategy for community-acquired pneumonia. It aims to optimise antibiotic use and reduce antibiotic resistance. During the COVID-19 pandemic: for children and young people, follow the recommendations in this guideline

Overview | Pneumonia (community-acquired): antimicrobial ...

The microbial etiology of community-acquired pneumonia (CAP) is still not well characterized. During the past few years, polymerase chain reaction (PCR)-based methods have been developed for many pathogens causing respiratory tract infections.

Etiology of Community-Acquired Pneumonia: Increased ...

What is community-acquired pneumonia (CAP)? CAP is a lung infection that you get outside of a hospital or nursing home setting. Your lungs become inflamed and cannot work well. CAP may be caused by bacteria, viruses, or fungi.

Community Acquired Pneumonia - What You Need to Know

In community-acquired pneumonia (CAP), you get infected in a community setting. It doesn't happen in a hospital, nursing home, or other healthcare center. Your lungs are part of your respiratory system. This system supplies fresh oxygen to your blood and removes carbon dioxide, a waste product.

Community-Acquired Pneumonia in Adults | Cedars-Sinai

Background: The distribution of the microbial aetiology and mortality of community-acquired pneumonia (CAP) was investigated in relation to the clinical setting and severity scores (pneumonia severity index (PSI) and confusion, blood urea nitrogen, respiratory rate, blood pressure, age (CURB-65)). Methods: 3523 patients with CAP were included (15% outpatients, 85% inpatients).

Microbial aetiology of community-acquired pneumonia and ...

hospital-acquired pneumonia – pneumonia that develops in hospital while being treated for another condition or having an operation; people in intensive care on breathing machines are particularly at risk of developing ventilator-associated pneumonia; Risk groups. The following groups have an increased risk of developing pneumonia:

Pneumonia - NHS

The role of mixed infection in community-acquired pneumonia remains of uncertain significance. It should be suspected in individuals who fail to respond to therapy for a specific documented pathogen or if epidemiologic, clinical or radiographic clues are most consistent with an alternative diagnosis.

Community-acquired Pneumonia Caused by Mixed Aerobic ...

Patients with mixed pyogenic pneumonia more frequently developed shock when compared with patients with single pyogenic pneumonia (18 versus 4%). In conclusion, mixed pneumonia occurs in .10% of cases with community-acquired pneumonia requiring hospitalisation. KEYWORDS: Community-acquired pneumonia, hospitalisation, mixed pneumonia

Mixed community-acquired pneumonia in hospitalised patients

Community-acquired pneumonia (CAP) is a significant cause of morbidity and mortality in adults. CAP is defined as an infection of the lung parenchyma that is not acquired in a hospital, long-term...

Diagnosis and Management of Community-Acquired Pneumonia ...

The role of mixed community-acquired pneumonia (CAP) is controversial. The aim of the present study was to determine the incidence, principal microbial patterns, clinical predictors and course of ...

(PDF) Mixed community-acquired pneumonia in hospitalised ...

Community-acquired pneumonia (CAP) is an important cause of morbidity and mortality throughout the world in all age groups.

Incidence and characteristics of viral community-acquired ...

Community-acquired pneumonia (CAP) can be caused by viruses, bacteria and fungi (Figure 1). Viral pneumonia is a common complication of influenza-like illnesses and is a complication of SARS-COV-2. Viral pneumonia may clear up on its own; however, when severe, it can be life-threatening.
