This volume contains the proceedings of the conference String-Math 2012, which was held July 16-21, 2012, at the Hausdorff Center for Mathematics, Universität Bonn. This was the second in a series of annual large meetings devoted to the interface of mathematics and string theory. These meetings have rapidly become the flagship conferences in the field. Topics include super Riemann surfaces and their super moduli, generalized moonshine and K3 surfaces, the latest developments in supersymmetric and topological field theory, localization techniques, applications to knot theory, and many more. The contributors

refereed post-conference proceedings of the 8th International Conference on Mathematical Methods for Curves and Surfaces, MMCS 2012, held in Oslo, Norway, in June/July 2012. The 28 revised full papers presented were carefully reviewed and selected from 135 submissions. The topics range from mathematical analysis of various methods to practical implementation on modern graphics processing units. The papers reflect the newest developments in these fields and also point to the latest literature.

face challenges in the wake of new technological advancements in our society. Continuous advances in education technology have provided the mobile learning community with inquiries on how these innovative devices may be used for teaching. Innovations in Mobile Educational Technologies and Applications presents a collection of knowledge on the developments and approaches of mobile educational technology. Bringing together points of view from both technological and pedagogical practices, this book aims to enhance interest in nontraditional approaches to learning.
