Recent Developments In Hepatitis C

Hepatitis C virus (HCV) infection is an epidemic disease and a significant worldwide health problem. Despite impressive improvements in the efficacy of the standard, interferon-based therapies, at present, the virus can not be eradicated in the majority of infected individuals. The last decade has w ...

Recent developments in the discovery of hepatitis C virus ...

The development of advanced fibrosis typically occurs over an estimated 20-30 years. 12 Thus, the age group that acquired HCV 20-30 years ago is now presenting with complications of advanced fibrosis and cirrhosis, such as hepatic encephalopathy, varices, ascites, and, ultimately, liver failure or HCC. 1 Despite the decrease in the incidence of new infections, more patients are presenting with complications associated with advanced fibrosis. 8 Furthermore, an estimated 75% of the genotype 1 ...

Recent Developments in the Treatment of Chronic Hepatitis C

Treatment of chronic hepatitis C virus (HCV) infection with interferon based therapies has been part of clinical practice for more than 10 years. While there have been incremental steps in improving sustained virological response (SVR), limited progress has been made in developing agents that eradicate the virus in all infected patients.1The development of effective antiviral agents has been hindered by several key factors, including the genetic heterogeneity of HCV, lack of available ...

New developments in hepatitis C (1992) | www.narcis.nl

Abstract: Hepatitis C virus (HCV) has deceived researchers for seventeen years now and although the current therapy regimen has been optimized by the development of pegylated interferon- α and the addition of ribavirin, no new agent to treat HCV infected patients has yet reached the market. A new era is approaching the HCV research due to new developments for the propagation of the virus in a cell-based system, which may lead to new drug innovations.
